

Amendment to the Specification:

Please amend the paragraph beginning on page 2, line 27, and ending on page 3, line 2 as follows:

US-A 5,030,675 describes molding compositions of polycarbonate, polyalkylene terephthalate, emulsion-ABS graft polymers, ~~monophates~~ phosphorous compounds as flameproofing additive and fluorinated polyolefins as antidripping agent. The molding compositions are distinguished by improved weld line strength but have a comparatively low level of impact strength. Furthermore, the flameproofing additives that are used have a tendency to bleed, which can lead to considerable disruptions to the processing operations.
